Capture your dream

Chamfered Profile

features

- 1 Choice of shaped or chamfered system.
- 2 Low level co-extruded gaskets mean that less gasket is visible.
- 3 Multi-chamber profile improve thermal insulation and increase rigidity.
- 4 3mm outer walls, routinely tested.
- 5 Steel or aluminium reinforcement.
- 6 Wipe clean surface

Inspirational Ideas for...

...the way you live

Whether you are the proud owner of a period house, or a modern apartment, we can provide a window style to enhance the character of your home and express your individuality. We can even provide windows that can be cleaned on the outside from the inside, a real benefit in today's fast moving environment.

Shapes & Styles

Select your opening styles and window shapes. All shapes and styles can be manufactured, as each window is tailor-made to your requirements.

Residential Doors

The front door is an important purchase. Our residential doors offer you versatile choice for your home providing the opportunity to mix and match colours and designs depending on your own individual requirement. It can be combined with any style of panel or glass to create the desired effect for your home.

Patio Doors

The patio door is a unique combination of appealing design and quality that provides an attractive and secure solution.

Security

The windows and doors have been designed with security in mind. The home owner can rest easy. Our windows have an additional option of being fitted with shootbolts and our standard door has a 5 point locking system or for extra peace of mind a hooklock system can be fitted.

Heat loss

Each opening is fitted with draught proofing seals inside and out providing a snug fit which eliminates draughts and reduces noise. Further heat and noise insulation can be provided by a choice of double or glazed sealed units.

"Your choice -
our expertise"

Old or new - every home can be improved by the right kind of replacement window.

Versatile enough to meet your needs

Bay windows can be easily and sensitively renewed.

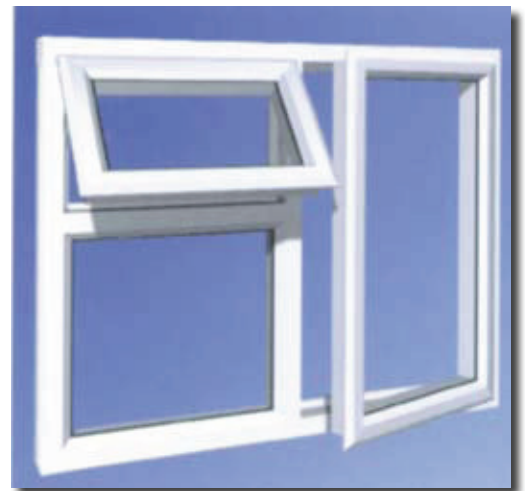

Small details make a big difference

Bow windows add character and a feeling of space

Appearance

Fitting the right replacement window preserves the “look” and “character” of a building. That is why we offer a range of doors and windows, which will suit almost any style of house - be it brand new or hundreds of years old.

Conservatories

Conservatories

By adding a conservatory to your house, you are bringing a whole new dimension to living. It gives you an additional room. Use as you choose, a playroom, dining room, entertaining room or just your own retreat.

Your new conservatory will give you

- more light
- more space
- increase value of your home

Composite door

We are pleased to be associated with the Palladio Composite door collection. It is a 65mm fibreglass reinforced composite door with a combined glazed U value of .64 using triple glazing and a warm edge seal. The style of lock used is that of a 3 hook, 2 shootbolt locking system, combined with a visually concealed hinge.

Available in colours:

White, Cream, Red, Blue, Green, Black and Light Oak

Energy Efficient window

Energy rated windows - Eco friendly windows - Environmentally friendly windows

Energy Window

Frames Direct Ltd
PVC U Casement Window
Frames Direct Elite – A Rating

	
Energy Index (kWh/m²/year) <small>(Energy Index certified by BFRC and based on UK standard window. The actual energy consumption for a specific application will depend on the building, the local climate and the indoor temperature)</small>	0
The climate zone is:	UK
Thermal Transmittance (U _{window}) Solar Factor (g _{window}) Effective Air Leakage (L _{factor})	1.4 W/m ² .K 0.44 0.00 W/m ² .K

 Reg. No.: 1294 M238
www.bfrc.org

Window Energy Rating is a method for assessing the total energy performance of a complete window.

An A-G energy rating has been developed for windows by the BFRC. This is the same as the rating systems used for household appliances - such as fridges and light bulbs. It clearly shows the products that can save customers money and assist in the reduction of CO₂ emissions.

The lifetime cost of heat lost through a window is greater than the purchase cost

The cost of a window is not just the purchase cost – it is also the cost of operating the window. The cost of heat loss through a window easily exceeds the cost of the window over the typical lifetime of a window.

Window heat losses can account for over 30% of total heat lost from a house. This can be significantly reduced using energy efficient windows.

Windows have traditionally been a large source of energy loss from houses but this can be nearly halved by the use of the new energy efficient technologies.

Energy efficient windows improve the comfort of homes

Energy efficient windows improve the comfort of homes by providing uniform temperatures throughout the house. They can dramatically increase the amount of effective and usable living space.

Energy efficient windows save energy and reduce greenhouse gases

Energy efficient windows will help to minimise heating and lighting costs. Saving energy benefits the environment by reducing greenhouse gas production.

Energy efficient windows can save money.

Energy efficient windows reduce energy and directly reduce heating bills.

Glass & Design

High performance insulating glass

136% better than standard double glazing thermal efficiency

- eliminate heat loss during cool months
- help cut your energy costs/fuel bills
- make your home more comfortable
- eliminate uncomfortable cold spots close to windows

Glass for security

Installing toughened and laminated glass will prevent glass being easily smashed. Similar glass is used in large shop windows.

Feature glass

Bring beauty to your home inside and out with georgian, crystal cut or leaded glass.

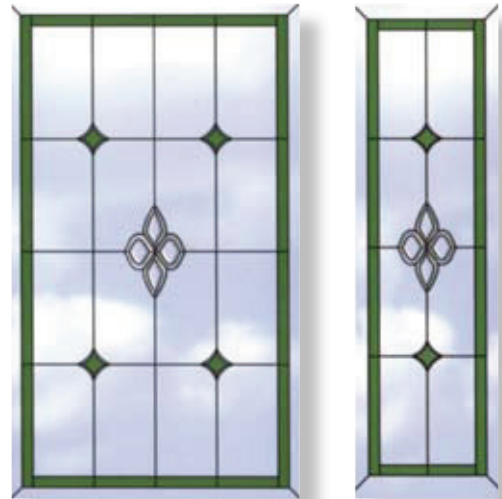

Decorative glass

For that individual touch, the exciting decorative glass range will allow you to bring that very special touch to your home, inside and out.

Glass that is different

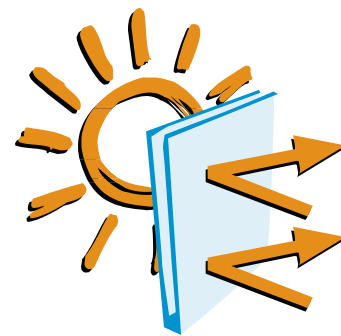

Elite SE is the first soft-coat, low-e triple-glazed unit made available to the window market. After months of development and testing, a u-value of .7 was confirmed in the laboratory.

2 Elite coatings combined with krypton gas in both spacers and, of course, our usual double seal unit all combine to achieve this amazing u-value. With Elite I.I, the most popular and most specified low-e glass on the market. Now Elite SE with it's .7 u-value can be added to this unrivalled range.

Outside

Short wave energy originating from the sun

Inside

Long wave radiation heat generated by heating systems, lighting and building occupants

Greater comfort & lower energy costs for your home
